UP TO 45% OF PATIENTS WITH GASTROINTESTINAL (GI) DISORDERS ARE AT RISK OF MALNUTRITION^{1,2}

Patients with GI disorders can present with several symptoms, including diarrhoea, bloating, abdominal pain and vomiting.³

If symptoms are improperly managed, this may lead to:

- ↓ nutritional intake
- ↑ nutritional losses
- ↑ malnutrition risk

ESPEN guidelines emphasise the importance of nutritional support in patients with GI disorders.^{4,5} However, tolerance to tube feeds containing whole proteins and fats is often poor in these patients.^{3,6}

In patients with GI disorders, when absorption and digestion of nutrients is impaired, peptide-based feeds have been shown to improve tolerance.^{3,6}

INTRODUCING NUTRISON PEPTISORB PLUS HEHP

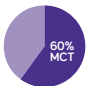

Nutrison Peptisorb plus HEHP is a new peptide-based option for tube-fed patients with GI intolerance symptoms, designed to improve their tolerance and increase their nutritional intake.

Peptide-based
100% whey protein

High protein
tube feed*

Readily absorbed MCT
60% of fat

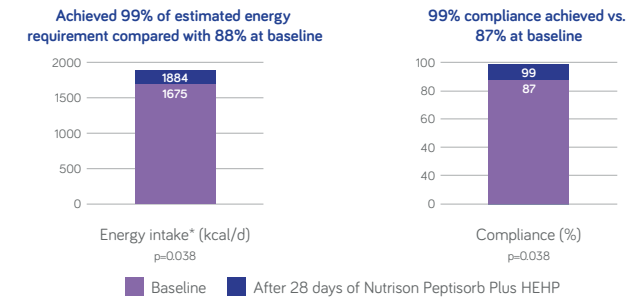

High levels of sodium
and potassium to help
minimise losses**

*7.5 g/100 ml protein **Sodium 197 mg/100 ml, potassium 340 mg/100 ml

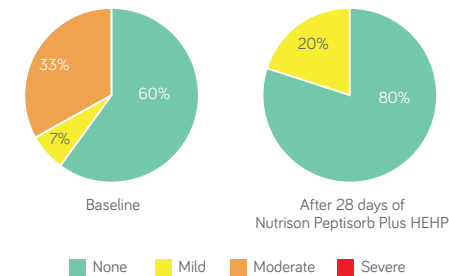

NUTRISON PEPTISORB PLUS HEHP IS PROVEN TO IMPROVE GI TOLERANCE AND INCREASE NUTRITIONAL INTAKE⁶

Nutrison Peptisorb Plus HEHP was tested in a 28-day clinical study in adult tube-fed patients with complex conditions, in 10 NHS centres around the UK.⁶

Nutrison Peptisorb Plus HEHP was found to be well tolerated and accepted with excellent compliance and no change in anthropometry:⁶

Nutrison Peptisorb Plus HEHP was also shown to significantly reduce the severity of diarrhoea symptoms (p=0.023):⁶

- Nutrison Peptisorb Plus HEHP showed an improvement in 6 out of 7 GI symptoms^{6†}

86% of dietitians felt that patients tolerated and/or exceeded tolerance expectations⁶

“Patient [was] fully compliant and tolerated the product well. This is the highest (and healthiest) weight this patient has ever been”

†Improvements seen in bloating, flatulence, burping, abdominal pain, nausea and constipation. The only exception was an episode of vomiting. However, the patient completed the trial with no GI tolerance or compliance issues.
